

Be cyber secure: travel safety

Whether you're a frequent business traveler or take the occasional trip, traveling abroad can make you more vulnerable to cyber attacks. Business travelers are especially at risk because they often carry sensitive data on their devices. In many countries there are no privacy or legal restrictions against technical surveillance. When you travel overseas, it's a good idea to take extra precautions.

→ Cybercriminals may be trying to steal confidential information by:

- **Hacking Wi-Fi networks**
- **Bluetooth connections**
- **Shoulder surfing** — reading your screen or watching your keystrokes.
- **Spyware** that you unwittingly download by visiting an untrustworthy website or plugging in a corrupted or compromised USB drive.
- **Searching your belongings** when you're not watching.

→ Be proactive:

- **Only bring devices your company has approved for travel**, or remove sensitive data (including voicemails) from devices before traveling.
- **Disable remote and automatic connection** to Wi-Fi and Bluetooth on your devices.
- **Update your operating systems** and security software before you travel.
- **Avoid all public Wi-Fi networks..**
- **Install a virtual private network***, or VPN, on your devices to encrypt and protect your internet traffic and passwords even when using public Wi-Fi.
- **Stay constantly aware** of your surroundings and use privacy screens when you can.
- **Don't leave your devices** unattended; keep them on your person or in a secure location.
- **Protect your devices** when using public USB power stations by using power only cables, and never plug an unknown storage device into your laptop or phone.
- **Notify your bank** of travel if using debit/credit cards.

→ If you suspect you have been targeted:

- **Don't delay.** Acting quickly after an event can minimize damage to your business.
- **Tell your employer** if your work device has been stolen, or if you think your company's network has been breached.
- **Change all passwords** that may have been compromised.
- **Know and follow your local laws** and guidelines for cyber incidents.
- **Document everything** about the event. The more information you have, the better armed you may be to assist an investigation by your company, your bank and law enforcement officials, and the better prepared you will be against future events.

Visit www.bankofamerica.com/security to learn how to help protect yourself and those closest to you.

*Banking sites may block VPN access.

IMPORTANT INFORMATION
